

## Koders, Inc. Corporate Fact Sheet

**About Koders** Koders, Inc. delivers sophisticated tools and technologies that accelerate efficient software development. Koders products enable companies to create, share and reuse source code in a manner that dramatically improves developer productivity and brings applications to market faster. Koders is a privately held and privately funded company.

**Market Position** Koders serves over 15 million software developers worldwide, by enabling them to leverage existing code from both open source and proprietary code bases to save time, create higher-quality applications and reduce development costs.

**Products/Services** ***KODERS.COM***  
Koders.com is the leading comprehensive search engine for open source code. The web site provides developers with an easy-to-use interface to search for source code examples and discover new OSS (Open Source Software) projects that can be leveraged in their own applications. The high-performance Koders search technology indexes thousands of open source software projects from leading universities, consortiums and organizations including Apache, Mozilla, Novell Forge, SourceForge, and others. Developers use Koders.com to quickly search over 225 million lines of open source code written in more than 30 programming languages including Java, C, C++, C#, Perl, Python, Ruby, Visual Basic.Net and many others. Since its official launch in April 2005, Koders.com has become an increasingly popular resource for developers worldwide.

### ***KODERS ENTERPRISE EDITION***

The Koders Enterprise Edition is a licensable version of the Koders search technology that enables organizations to recognize significant productivity gains and bring applications to market faster, with fewer errors, and at reduced development cost. By deploying source code search inside the enterprise firewall, development teams and managers can quickly find and catalog existing intellectual property assets to more efficiently create new applications. In addition to the Koders core search functionality, the Enterprise Edition includes management and reporting modules that accelerate development best practices such as source code reuse.

### ***KODERS DESKTOP PLUG-INS***

Koders also offers Desktop Plug-ins that give developers access to reusable source code from within their development workspaces. The plug-ins enhance Integrated Development Environments (IDEs) by enabling developers to easily search Koders.com or a Koders Enterprise code database at the time when they need code most - during application development. The Koders Plug-ins also feature localization support and Koders SmartSearch™, an innovative service that monitors the software application being developed and visually notifies developers of opportunities to leverage existing code.
